(1) Whereas the HI FICA employer payroll tax rate is 1.45% on all wages, the employee rate is 1.45% up to the tax point and 2.35% on wages over the tax point. Tax point is \$250,000 for joint returns and \$125,000 for married filing separately.

(2) Full Retirement Age was 65 for people born before 1938, and is gradually increasing for people born in 1938 and later years – to age 67 for people born in 1960 or later (see chart on right). The dollar amounts shown assume no earnings during the year the individual attains FRA.

(3) Prior to the year the individual attains FRA, Social Security benefits are reduced \$1 for every \$2 in earnings above the limit. In the year the individual attains FRA, benefits are reduced \$1 for every \$3 of earnings in excess of the limit, but only pre-FRA-month earnings are considered and only pre-FRA-month benefits are reduced. (In the first year that there is a month in which the individual does not earn more than 1/12 of the applicable annual limit, an alternative monthly-limit-based test is used if it results in greater benefits paid.)

(4) Adjusted gross income plus tax-exempt interest, generally from 2nd prior year. For example, 2023 premiums are based on 2021 AGI + TEI. Part D amounts shown are income-related adjustments payable to Medicare, over and above the plan premium.

(5) The breakpoints shown for these rows apply for 2023 premiums only; breakpoints for prior years were different.
